

OOPs: Method

Simple answer, layman analogy, and a tiny Python example.

8. Method

Simple answer	A method is a function that belongs to a class or object.	
Analogy	A mobile phone has actions like call, message, and take photo. These actions are like methods.	
Example	A Car object can have methods like start(), stop(), and accelerate().	
Python		<pre>class Car: def start(self): print("Car started")</pre>
